PRIMÄRE PRÄVENTION „Allostatic Load“

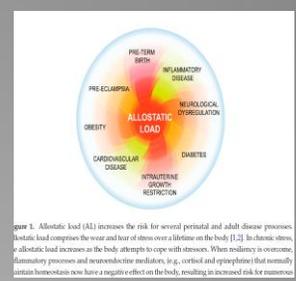

Figure 1. Allostatic load (AL) increases the risk for several perinatal and adult disease processes. Allostatic load comprises the wear and tear of stress over a lifetime on the body [1,2]. In these stressors, allostatic load increases as the body attempts to cope with stresses. When resilience is overcome, inflammatory processes and neuroendocrine mediators, (e.g., cortisol and epinephrine) that normally maintain homeostasis now have a negative effect on the body, resulting in increased risk for numerous

Díez-Izquierdo et al. *Env. Res.* 2018; 160: 547-53

Transmission von Stress über Generationen

Physiologische Folgen „neuroendokriner Reaktionen auf chronischen Stress“ (McEwen and Stellar, 1993).

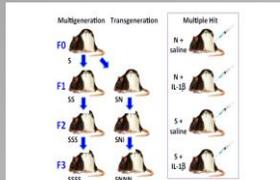

Figure 2. Allostatic load models in pregnant Long-Evans rats. We developed two longitudinal models: a multigenerational (left) and a transgenerational model (center), and a single generation full-F1 multiple hit model (right) that result in perinatal loss plus other adverse pregnancy outcomes. In the multigenerational model, pregnant dams in each generation are subjected to restraint and swim stressors (S) or gestational day (GD) 12-14. The transgenerational model differs in that only pregnant dams from the F0 generation are stressed; their daughters and granddaughters are not stressed (N).

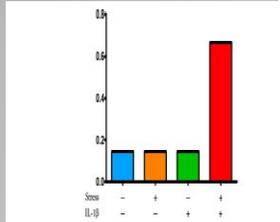

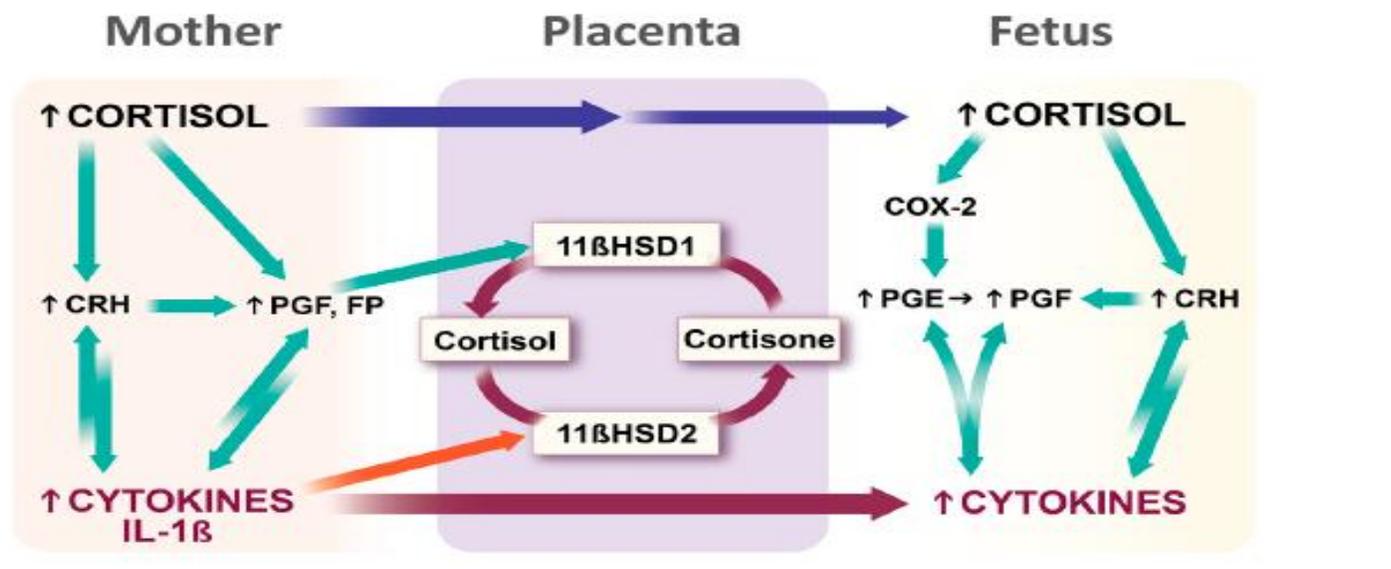

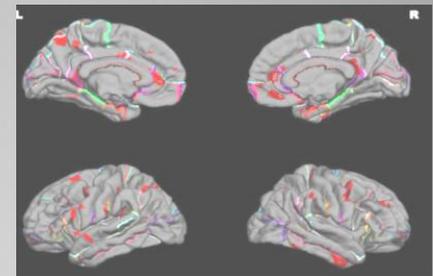

Figure 3. Adverse pregnancy outcomes in rats: frequency distribution. Two-hit hypothesis. Administration of stress (water swimming and restraint from gestational day (GD) 12-14) plus interleukin (IL-1 β) (5 μ g/kg, IP, GD 17-delivery; see Figure 2) to pregnant Long-Evans rats caused more pregnant dams to deliver early (most common outcome), deliver late or have other adverse pregnancy outcomes (delivery of fetuses with low birth weight, stillbirths, etc.).

Cortisol, Epinephrine, Reaktionen auf inflammatorische Prozesse HOMEOSTASE (?)

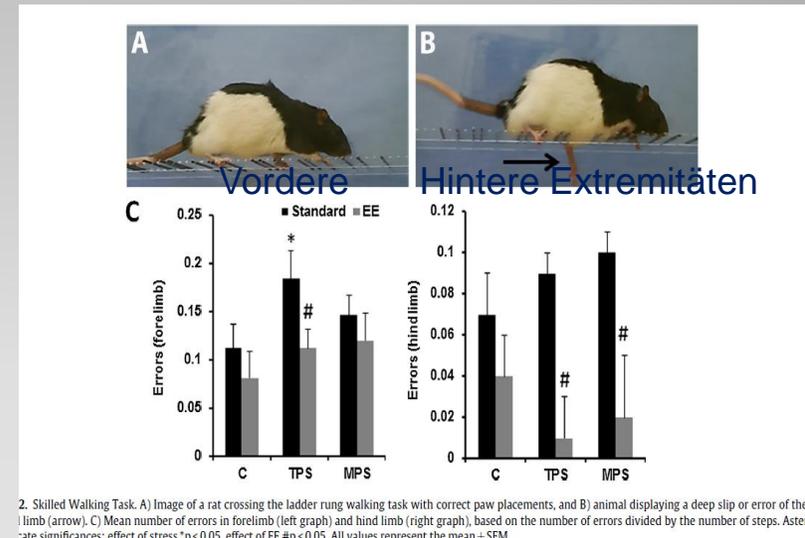

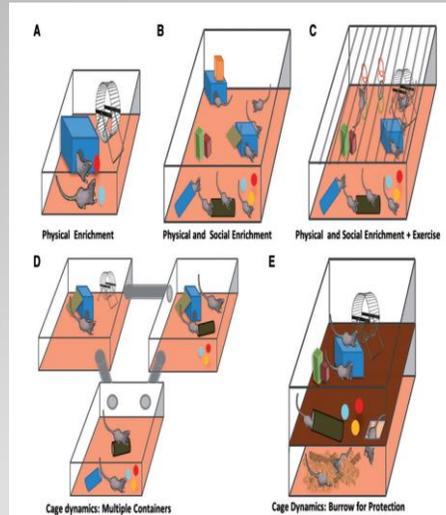

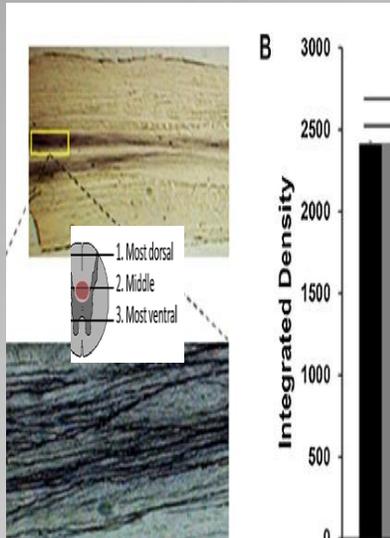

Cytokine: blockieren 11 β -HSD2 / Cortisol – Cortison (inaktiv) **11 β HSD2 schützt Fet vor Cortisol-Effekt**

„Two-hit hypothesis“: Anamnese mit induziertem Stress kombiniert mit Injektion von IL-18 verursacht Frühgeburten bis in 3. Generation. *Olson et al. Int. J. Mol. Sci.* 2015, 16, 29856–74

“Environmental Enrichment” wirkt Stress entgegen

Erhöhter Stress (über Generationen) führt zu verminderter axonaler Dichte im ZNS, GC-Rezeptoren, ängstlichem Verhalten, gestörter Koordination

C= Kein Stress, TPS= Stress von Eltern MPS= Stress über mehrer Generationen

EE vermindert die neuro-morphologischen Folgen von Stress/Familienanamnese.

Dies ist auch messbar (Stress Marker/miR-182 expression + brain-derived neurotrophic factor (BDNF)/ Neurotrophin-3 (NT-3) Regulation.

Mc Creary et al. Neuroscience Letters 2016; 632: 181–186

SEKUNDÄRE PRÄVENTION

- SUCHE

MM-Verschluss (n=7)

Pessar (147) vs. Vag. Progesteron (> 500)

Erste Langzeit-Untersuchung nach Pessar (3/4 J)

Mortalität: 5% vs 26%, aOR 0.14; [95% CI 0.04 to 0.50]

Bayley-III nach 2 J für 173/ 241 (72%) Überlebende

Tod oder schwere Behinderung 10% vs 29% P vs. C aOR 0.26 [95% CI 0.09 - 0.75]

Erster RCTs /TVS Vergleich Pessar- v.Progesteron (400 mg, n=300)

Dangh et al. AJOG 2018 suppl. 1 abstract 803 (late breaking news SMFM)

Women with a CL < 28 mm (TOP)

Outcome	Arabin Pessary	vag.Progesterone	RR (95%CI)
Delivery < 34 weeks	10/49 20.4%	16/34 44.0%	0.46 (0.24-0.89)
Delivery < 37 weeks	23/49 46.9%	26/36 72.2%	0.65 (0.45-0.93)
BW<2500 g	50/98 51.0%	51/72 70.8%	0.72 (0.23-0.82)
Admission NICU	14/90 15.6%	28/63 44.4%	0.35 (0.11-0.49)
RDS	12/90 13.3%	21/63 33.3%	0.40 (0.14-0.69)
Neonatal sepsis	6/90 6.7%	33/285 23.8%	0.28 (0.08-0.63)

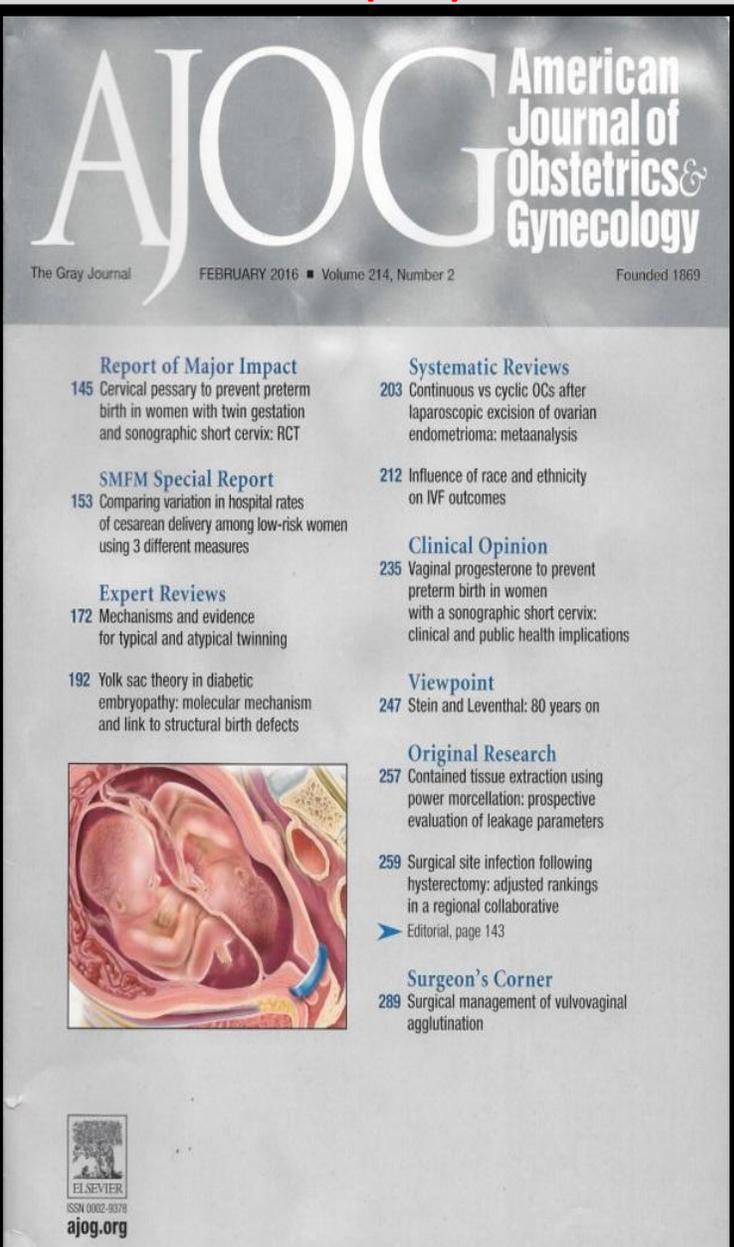

Erster RCTs /TVS Vergleich Pessar- v.Progesteron (200 mg, n=300)

Cruz-Melguizo et al. Obstet Gynecol 2018; Epub ahead of print 7-9

Women with a CL < 25 mm,

Outcome	Arabin Pessary	vag.Progesterone	RR (95%CI)
Delivery < 34 weeks	18/127 14%	17/119 14.0%	-0.11% (-8.8.8.5%)

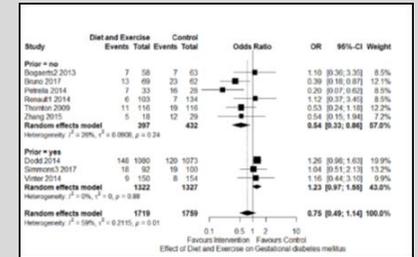

A cervical pessary was not inferior to vag. PG for preventing SPTB before 34 weeks

Rückblick und Ausblick

Deutsche Professoren sind eine schwer zu befriedigende Menschenklasse mit durchkreuzenden Interessen, Neid, Lust zu regieren und einseitigen Ansichten, wo jeder meint, dass nur er allein Förderung und Unterstützung verdiene.

Wilhelm von Humboldt, 1809.

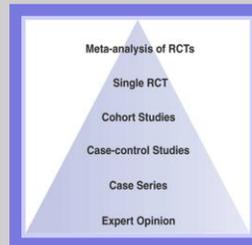

Zuerst die Beobachtungen, dann der Versuch, das Denken ohne Autorität, die Prüfung ohne Vorurteil. Mediziner kann nur der genannt werden, der als letzten Zweck seines Strebens das Heilen betrachtet.

Rudolf Virchow , 1821-1902

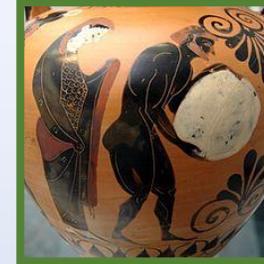

Die gefährlichste Weltanschauung ist die Weltanschauung derer, die die Welt nie angeschaut haben.

Alexander von Humboldt, 1811

I hatte einen Traum und träume noch ...

*Ich lebe mein Leben in wachsenden Ringen, die sich über die Dinge zieh'n.
Ich werde den letzten vielleicht nicht vollbringen, aber versuchen will ich ihn (Rilke).*
